Abstract (Basic): KR 2003043898 A

NOVELTY - An electronic **abacus** having a game function is provided to make a user directly confirm a process and a result of the calculation by displaying a calculation value on a display and outputting it through a speaker as a voice, as adding an **abacus** game system including the speaker and the display to the electronic **abacus**.

DETAILED DESCRIPTION - The electronic **abacus** comprises an **abacus** frame(1), a digit axis(2), and **beads** (3). A transmitting device(10) includes an A/D(Analog/Digital) converter converting the calculation information according to the position and the movement of the digit axis and the **beads** (3) into a digital signal, a data analysis part, and a USB(Universal Serial Bus) control part. A USB port(30) transmits the information analyzed by the transmitting device(10) to a computer having a USB connector. **Sensors** detect the position of the digit axis and the movement of the **beads** (3) on the digit axis, and output the **detected** signal to the transmitting device(10). The transmitting device(10) is connected to the **abacus** game system(60) having the speaker(61), the display(62), a computer connection button(63), and a transmitting/receiving button(64).
